Uro-Scopic Trainer

Part No: 60374

A versatile model that provides for a range of urological endoscopic techniques and procedures to be acquired in line with a trainee’s clinical progression.

Skills
- Fluid management
- Insertion, manipulation and removal of instruments
- Examination of the urethra (urethroscopy)
- Examination of the bladder (cystoscopy)
- Examination of the ureters using rigid or flexible instruments (ureteroscopy)
- Stent and guidewire insertion
- Lithotripsy
- Stone retrieval

Features
- Excellent visualization throughout the length of the urinary tract:
  - urethra containing prostatic lobes and verumontanum
  - bladder including trigone and two ureteric orifices
  - ureters containing entry ports for insertion of artificial stones and blood
- Accepts rigid and flexible scopes
- Translucent ureters allow trainees to visualize precise instrument placement within ureter and renal pelvis
- Supplied with 3 sizes of stones
- Allows stones to be placed in the bladder, ureters and renal pelvis
- Stones fragment realistically during lithotripsy
- Mock blood can be introduced during training to obscure vision and enhance realism
- Incorporates a simple but effective irrigation and drainage system to contain operative liquids
- Clamps provided to secure Trainer to edge of bench top
- Quick and easy to assemble and maintain
- Supplied in a heavy duty flight case

Package supplied  Part No
- 1 Uro-Scopic base with male perineum
- 1 Uro-Scopic Bladder & Penis 60391
- 2 Ureters Opaque 60385
- 2 Ureters Translucent 60388
- 1 Bag of Stones - Small 60384
- 1 Bag of Stones - Medium 60390
- 1 Bag of Stones - Large 60383
- 1 Pair of tweezers
- 1 Bottle of Silicone Oil 50180
- 1 Bottle of Mock Blood 00220
- 2 Bench top clamps

Note
Limbs & Things do not supply any endoscopic/laparoscopic electronics, devices, instruments or their consumables.
Adult Male Circumcision Trainer

Part No: 60395 Light
Part No: 60392 Black

This product has been designed for healthcare professionals practicing the skills for prophylactic and therapeutic male circumcision. It allows practitioners to perform the 3 most common methods of circumcision.

Male circumcision is gaining recognition as an important practice for limiting the spread of HIV across Sub-Saharan Africa, as numerous regional and studies have noted a lower risk of HIV infection in men, as well as a lower HIV prevalence in populations where male circumcision is common.

This product has been designed and evaluated in collaboration with the MSR Israel Center for Medical Simulation; as well as Mrs Suzie Venn and her colleagues at the Royal College of Surgeons England.

Skills
• Three methods can be performed:
  - Forceps guided
  - Dorsal Slit method
  - Sleeve resection

Features
• Realistic and accurate representation of the foreskin: realistic retraction of foreskin and realistic representation of the layers of the foreskin
• Able to perform penile ring block technique
• Penis presented in supine position
• Can be used to practice suturing techniques
• Available in light or black skin tones
• Compact and portable
• Latex free

Package supplied Part No

Light
• 1 Circumcision Foreskins (Pack of 5) - Light 60396 (including elastic bands and lubrication sachet)
• 1 Circumcision Penis - Light 60397
• 1 Skin Pad Jig Mk 3 00550

Black
• 1 Circumcision Foreskins (Pack of 5) - Black 60393 (including elastic bands and lubrication sachet)
• 1 Circumcision Penis - Black 60394
• 1 Skin Pad Jig Mk 3 00550
